SPECIFICATION

Product Name: Dicreatine Malate 99%

Product Code: C-009

Product Description: A highly soluble creatine salt that provides much greater increase in creatine bioavailability over regular creatine monohydrate. The compound is creatine bound to malic acid. Malic acid is a naturally occurring kreb cycle intermediate, meaning that malic acid plays a crucial role in our natural energy cycle.

Appearance :	White powder
Assay (Dry):	> 99.0%
Loss on drying:	≤1.0%
Heavy Metal:	≤10ppm
As:	≤1ppm

Product Application:

Dicreatine malate has shown enhanced metabolic properties compared to creatine monohydrate, for example, enhanced efficacy for increasing muscle mass, enhanced efficacy for increasing cell volumization, enhanced efficacy for decreasing adipose stores, enhanced efficacy for increasing overall strength and endurance. Still further, Dicreatine malate has been shown to increase the bioavailabilities of both the creatine and malic acid moieties over the individual bioavailabilities of creatine monohydrate and malic acid.

Storage and Transportation: Keep in tightly closed container, stored in a cool, dry, ventilated place. The valid period is 2 years.

Package:

25kg/box
